THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by examiner to change the TILTE into "INTERFEROMETER IN A NON-MECHANICAL MANNER BY A PANCHARATNAM PHASE".

DETAILED ACTION

Claims 1-5 are cancelled. Claims 6-27 are pending.

Allowable Subject Matter

Claims 6-27 are allowed. The following is an examiner's statement of reasons for allowance:

Claims 6, 12 and 17 are allowed since there is no prior art teaches a tunable interferometer for measuring an optical surface comprising:

- a reference surface, light from the at least one light source impinging the reference surface, the reference surface reflecting a first interference beam, wherein the reference surface is stationary when at least one light source impinges the reference surface;
- a test object, light from the at least one light source impinging the test object, the test object reflecting a second interference beam;
- at least one beam splitter, the first interference beam and the second interference beam striking the at least one beam splitter; and
- a polarizer polarizing the first interference beam and the second interference beam so that the first interference beam and the second interference beam each have a different polarization state relative to one another, the polarizer being disposed after the light source and before the beam splitter or the polarizer being situated between the light source and the beam splitter to form the polarized first and second interference beams;

- an analyzer positioned at an output of the interferometer, the analyzer having a variable polarization state, the analyzer tuning the interferometer as a function of the polarized first interference beam and the second interference beam,

wherein

- depending on the polarization state of the analyzer, an additional phase is introduced into the first and second interference beams of different polarizations so that an interference fringe pattern, imaging the test object, is displaced by a distance.
- the reference surface and test object are not displaced (not moveable) in order to effect the tuning of the interferometer.

Claims 7-11, 13-16, 18-22 are allowable since they depend on the allowed claims.

Claim 23 is allowed since there is no prior art teaches a tunable interferometer for measuring an optical surface comprising:

- a reference surface, light from the at least one light source impinging the reference surface, the reference surface reflecting a first interference beam;
- a test object, light from the at least one light source impinging the test object, the test object reflecting a second interference beam;
- at least one beam splitter, the first interference beam and the second interference beam striking the at least one beam splitter; and

- a polarizer polarizing the first interference beam and the second interference beam so that the first interference beam and the second interference beam each have a different polarization state relative to one another;
- an analyzer positioned at an output of the interferometer, the analyzer having a variable polarization state, the analyzer tuning the interferometer as a function of the polarized first interference beam and the second interference beam, wherein depending on the polarization state of the analyzer, an additional phase is introduced into the first and second interference beams of different polarizations so that an interference fringe pattern, imaging the test object, is displaced by a predetermined distance; and
- a first $\lambda/4$ retardation plate disposed between the reference surface and the test object,

wherein

- the retardation between the beam splitter and the analyzer forms a circular polarized light,
- the reference surface and test object are not displaced in order to effect the tuning of the interferometer.

Claims 24-27 are allowable since they depend on the allowed claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
